Advice to Authors

The illustrations that will appear in your contribution will be shown to best advantage if you follow the brief set of instructions below. Please read carefully. Thank you.

The Publisher

Preparation of Line Drawings

Illustration copy should be prepared to fit the format of the printed page (print area) so that 1 : 1 reproduction is possible. Where reduction is necessary, please state the desired scale.

Drawings are to be twice the final size and executed in indelible black ink. Important points to note: thickness of lines, size of inscriptions, size of measuring points, adequate spacing of shaded and dotted areas.

Words should be in upper and lower case characters, not CAPITALS. The following are optimal sizes as they appear in the journal: Capital letters and numbers: 2 mm Lower-case letters: 1.6 mm.

1

samples 1 to 5 show the original size and reduction $\times 50\%$

Selection of Illustration Material for Halftones (photographs, micrographs, X-rays, instrument traces etc.).

Photographs should be sharp, well-contrasted glossy prints of the original negative, trimmed at right angles. Halftone illustrations should be prepared to fit the format of the printed page (print area) so that 1 : 1 reproduction is possible. But if reduction is absolutely necessary, please state the desired scale.

Mark or crop marginal portions which are not required (at right angles, please).

Please see that illustrations that are to appear together are mounted accordingly as plates and that they correspond. Also they should not exceed the print area of the page, including room for the legend.

With X-rays, please indicate the significant parts on the back of the copy, or on an overlay.

Inscriptions, marks and scale lines should preferably be drawn neatly in black ink in an appropriate size on the face of the illustrations.

Inscriptions should be about 3 mm high. Where Letraset is used, please handle it carefully and protect the photographs with an overlay.
